Solve Absolute Value Inequalities with “Less Than” Let’s look now at what happens when we have an absolute value inequality. Everything we’ve learned about solving inequalities still holds, but we must consider how the absolute value impacts our work. Again we will look at our definition of absolute value.

Solving an Absolute Value Equation.

Recall that the absolute value of a real number (a) , denoted $(|a|)$, is defined as the distance between zero (the origin) and the graph of that real number on the number line. For example, $(|-3|=3)$

value operator, like $|x-5|=9$. The challenge is that the absolute value of a number depends on the number's sign: if it's positive, it's equal to the number: $|9|=9$. If the number is negative, then the absolute value is its opposite: $|-9|=9$. So when we're dealing with a variable, we need to consider both cases.
