non-invasive treatment for decayed baby back teeth. Decay is sealed under preformed (stainless steel) crowns, avoiding injections and drilling. It is one of a number of biologically orientated strategies for managing dental decay.. The technique has an evidence-base showing that it is acceptable to children, parents and dentists and it is preferred over

Hall Technique - Wikipedia

As for rotary instrumentation techniques in primary molars, in vitro studies found equal cleaning capacity but reduction of instrumentation time by the rotary technique [56–60]. The use of the rotary technique reduced the time of instrumentation and obturation to 63 and
