This lab uses paper chromatography where a piece of paper is used to wick solvent up to the pigments and separate them according to solubilities. The rate of migration on a chromatogram is the Rf value. Hypothesis . Plants contain several different pigments, and the rate of photosynthesis in plant cells is directly related to light and temperature.

BACKGROUND - College Board

Tip: "I had dropped the photosynthesis lab when I first started teaching AP Biology out of frustration. When the lab manual first came out (OK, I'm dating myself here) and the lab was included, I sunk into a short-lived funk (we were on shortened periods that day so I didn't have a full prep period). Then I had an epiphany.
