Preserved Cats | Carolina.com

If your cat is a female, locate the uterine horns, the ovaries and the vagina. If your cat is a male, locate the testes (if present) and the penis. Find a cat of the opposite sex to see structures your cat doesn't have. Where does the urethra exit the body in the male compared to that of a female cat?

Cat Dissection Guide - Biology LibreTexts

Cats have highly specialized teeth for killing prey and tearing meat. The premolar and first molar, together called the carnassial pair, are located on each side of the mouth. These teeth efficiently function to shear meat like a pair of scissors. While this feature is present in canids, it is highly developed in felines.
