DRL wiring diagram. The DRL system is different. The BCM looks at the input from the ambient light sensor. If it sees daylight and the parking brake isn't set, the BCM provides ground to the control coil in the DRL relay. Once the control coil has ground, the contacts close and the relay provides power to the DRL lights.

A straight-four engine (also called an inline-four) is a four-cylinder piston engine where cylinders are arranged in a line along a common crankshaft.. The vast majority of automotive four-cylinder engines use a straight-four layout: pp. 13-16 (with the exceptions of the flat-four engines produced by Subaru and Porsche) and the layout is also very common in motorcycles and other machinery.
