DC power distribution systems are used to take the output from a power supply system and facilitate the connection to the load(s). Although each one is unique, over the years Kepeco has found that using a series of proven common building blocks allows greater flexibility for custom tailoring to a particular application and environment, while maintaining high quality and reliability of the system.

KEPCO INC: DC POWER DISTRIBUTION SYSTEMS

Laboratory power systems shall be flexible to allow the anticipated increase in laboratory loads. Local distribution shall be provided based on the calculated load. However, more generous conduit sizing, sleeving, and space allocated in principal electrical cabinets or closets shall be provided.
