Of course there is more to TensorFlow than just creating and fitting machine learning models. Once we have a model that we want to use, we have to move it towards production usage. This chapter will provide tips and examples of implementing unit tests, using multiple processors, using multiple machines (TensorFlow distributed), and finish with ...

The data used in the workshop might be a bit small... for deep learning you might need a bit more terrain truth samples, but you could give a try with a small deep net). I don't think the virtual machine of the workshop will help much, because you must re-build OTB and build TensorFlow from sources.
