### Textbook Of Pleural Diseases Second

Malignant pleural effusion is the second most common cause of an exudative pleural effusion and the most common cause in patients over 60 years of age. 34 The fluid may accumulate due to overproduction from diseased pleura, obstruction of lymphatic channels, or atelectasis of adjacent lung. It is associated with significant morbidity and mortality.

Mesothelioma is a type of cancer that develops from the thin layer of tissue that covers many of the internal organs (known as the mesothelium). The most common area affected is the lining of the lungs and chest wall. Less commonly the lining of the abdomen and rarely the sac surrounding the heart, or the sac surrounding the testis may be affected. Signs and symptoms of mesothelioma may ...

Pleurisy, also known as pleuritis, is inflammation of the membranes that surround the lungs and line the chest cavity (). This can result in a sharp chest pain while breathing. Occasionally the pain may be a constant dull ache. Other symptoms may include shortness of breath, cough, fever or weight loss, depending on the underlying cause.. The most common cause is a viral infection.

Management of systemic lupus erythematosus (SLE) often depends on disease severity and disease manifestations, [] although hydroxychloroquine has a central role for long-term treatment in all SLE patients. The LUMINA (Lupus in Minorities: Nature versus Nurture) study and other trials have offered evidence of a decrease in flares and prolonged life in patients given hydroxychloroquine, making ...
