The Wild Life Of Our

"The Wild Life of Our Bodies" suggests that, like the pronghorn antelope, humans are in many cases overdesigned because of the loss of species (parasites, predators, symbiotes, etc.) that helped to make us who we are today. (One question that once puzzled biologists was why pronghorns were so much faster than every species they faced.)

The Wild Life of Our Bodies - Rob Dunn - Paperback

Book Summary. A biologist shows the influence of wild species on our well-being and the world and how nature still clings to us - and always will. We evolved in a wilderness of parasites, mutualists, and pathogens, but we no longer see ourselves as being part of nature and the broader community of life. In the name of progress and clean living, we scrub much of nature off our bodies and try to remove whole kinds of life - parasites, bacteria, mutualists, and predators - to allow ourselves to ...
