An umbrella review is a review of reviews. It compiles all the evidence from existing reviews on a topic to give a high level overview. An umbrella review is commonly conducted when there are multiple competing interventions for a condition. An overview of reviews about each of these interventions can be useful in determining how to best translate the evidence into practice.

An 'umbrella review' (or 'cross-synthesis of reviews') compiles evidence from multiple review reports that search for, appraise, and synthesize multiple studies on a topic. By incorporating existing syntheses of research evidence, an umbrella reviews aims to provide a meta-level analysis to cross identify research findings and gaps on a topic and highlight areas where the reviews may diverge.
